

Institute of Physics Talks

Last Day of the Dinosaurs

7 - 8pm, 11 December 2018, Lecture Theatre G, University of Surrey.

Extinction has always been part of Life on Earth. The ebb and flow of species can both evolve or disappear as a function of extinction events. The advent of 21st Century imaging technology now permits us to view past life in ways we never dreamt of, but also the mechanisms that have driven the extinguishing forces of mass

extinction events. Dinosaurs are without doubt an icon of extinction, but our knowledge of the events that closed the Cretaceous is still poorly understood. However, the latest technology, de novo approaches and new sites from around the globe are helping science constrain the timing and mechanisms behind the extinction of the dinosaurs.

Free event, all welcome.

This event is free to attend and registration is not required just come along. Please contact us in advance if you have any access requirements.
